ENGLISH

INTENDED USE

The extraction buffer (B-CAL-EX) is a reagent designed for the extraction of calprotectin in human stool specimens using the BÜHLMANN Smart-Prep or manual extraction method for laboratory analysis with BÜHLMANN fCAL® tests.

REAGENTS SUPPLIED

| Reagents | Quantity | | Code | Reconstitution |
|-------------------|-----------------------|------------------------|----------|----------------|
| | B-CAL-EX3 | B-CAL-EX12 | | |
| Extraction Buffer | 3 bottles x 125 mL | 12 bottles x 125 mL | B-CAL-EX | Ready to use |

Table 1

MATERIALS REQUIRED BUT NOT PROVIDED

- Smart-Prep (Code: B-CAL-RD, optional)
- 10 µL disposable inoculation loops
- 15 mL polypropylene tubes with screw caps required for standard extraction procedure
- Multitube vortex mixer
- Precision balance (10-150 mg)
- Micro centrifuge (\geq 3000 g)
- Plate shaker

REAGENT STORAGE AND STABILITY

Sealed / unopened reagents

Store at 2-8 °C. Do not use the reagents beyond the expiration date printed on the labels.

Opened reagent

Store for up to 6 months at 2-8 °C.

Table 2

WARNINGS AND PRECAUTIONS

- Read the instructions carefully prior to the use of the buffer. Buffer performance will be adversely affected, if the reagent is incorrectly stored as detailed in this instruction for use.
- This kit contains components classified in accordance with the Regulation (EC) No. 1272/2008: 2-methyl-4-isothiazolin-3-one hydrochloride (\geq 0,0015%), thus the reagents may cause allergic skin reactions (H317).
- Components must not be used after the expiry date printed on the labels.
- Let the reagent adjust to room temperature and mix well (vortex) before use.

Extraction

- To receive quantitative results it is important to homogenize the stool sample completely with the extraction buffer.

SPECIMEN COLLECTION AND HANDLING

Please see the corresponding instruction for use for BÜHLMANN fCAL® tests.

STOOL SAMPLE EXTRACTION

With the BÜHLMANN Smart-Prep

Refer to the corresponding Smart-Prep (Code: B-CAL-RD) instruction for use.

With the manual extraction method ¹⁾

- Label and weigh the empty polypropylene tube including the inoculation loop. Note the weight (tare).
- Take 50 to 100 mg of the stool sample by means of the inoculation loop and place it into the pre-weighted tube and weigh it again (gross weight). Avoid taking up dietary fibers present in the sample during the sampling process.
- Calculate the net amount of sample, by subtracting tare from the gross weight, break the inoculation loop away and leave the lower part of the loop in the tube.
- Add extraction buffer according to the formula
 $x \text{ mg stool} \times 49 = y \mu\text{L extraction buffer}$ (e.g. 50 mg stool + 2450 µL buffer) to the tube and close the tube.
- Extract the samples in the following way:
 - Vigorously vortex the extraction tube containing buffer and stool sample on a (multitube) vortexer (at highest speed) for 30 seconds.
 - Next, incubate the extraction tube for 25 +/- 5 minutes on a plate shaker at ca. 400 rpm. The inoculation loop inside the tube serves to enhance agitation.
 - Again, vigorously vortex the extraction tube for 30 seconds.
- Transfer 1.5 mL of the homogenate into a 2 mL Eppendorf tube and centrifuge in a microcentrifuge for 5 minutes at 3000 x g.
- Decant the supernatant into a fresh labelled tube and continue with the assay procedure of the corresponding BÜHLMANN fCAL® tests.

Important: The extraction buffer (B-CAL-EX) should only be used in combination with BÜHLMANN fCAL® tests.

¹⁾ According to the instruction for use of the BÜHLMANN fCAL® ELISA and Quantum Blue® fCAL tests.

CHANGELOG

| Date | Version | Change |
|------------|---------|---|
| 2022-04-26 | VA2 | Update to chapter <i>Warnings and precautions</i> Update to chapter <i>Reagent Storage and Stability</i> Revision of Chapter <i>Symbols</i> |
